IBM SmartCloud Enterprise IBM SmartCloud Enterprise, the unified management platform for IBM i and IBM SmartCloud, is available in multiple editions. The IBM SmartCloud Enterprise iSCSI Edition is a version of the IBM SmartCloud Enterprise that includes a Virtual Tape Library, using IBM iSCSI interface cards. The price of the iSCSI edition is \$1,495 for up to 25 Virtual Tape Libraries, \$1,595 for up to 50 Virtual Tape Libraries, and \$1,675 for up to 100 Virtual Tape Libraries. Embedded MultiMedia Controller (EMMC) The Embedded MultiMedia Controller (EMMC) is an electronic board that plugs into an IBM PC compatible computer motherboard and is required to boot from iSCSI. It is available in two different form factors. The first has a gigabit Ethernet port, USB 2.0 port and mini-PCI expansion slot, and the second has USB 2.0 port and a mini-PCI expansion slot. System i System i, introduced in September 2007, is IBM's server line for the i5/OS with optional iSCSI support. The product name for iSCSI System i5/OS is "System i Model 185" and the price of System i model 185 is US\$61,000. System

---

i is available in two form factors. The first form factor, Model 185-LF, has a standard chassis that measures approximately 19 inches by 12 inches and is intended for installations on rack mount servers. The second form factor, Model 185-LF+S, has a standard chassis that measures approximately 18 inches by 13 inches, and is intended for installations on desktop or tower servers. System i uses a specially built motherboard that plugs into an IBM i or PC compatible computer motherboard to allow it to boot from iSCSI. System i was initially available only as an IBM i-based server. Since April 2017, System i is available as a System i5/OS with iSCSI in HPE ProLiant systems. Sun Cluster Sun Cluster is a hardware and software platform designed for clustered computing. It is a platform that allows multiple nodes to cooperate in a manner similar to how one node would work together to perform the same work as a single node. Sun Cluster software is available free to academic users. A network of Sun Clusters can be viewed as a grid of computers. Sun Cluster uses the Sun iSCSI Target software 82157476af
